Assignment Tracker Word Document

The Assignment Tracker project is designed to help users efficiently manage and organize their assignments. The goal is to provide a simple, intuitive interface to track assignments by their title, subject, due date, status, and description. Users can add, edit, or delete assignments, and update their status as "Pending" or "Completed." The project leverages MongoDB for data storage, Express.js for server-side routing, and EJS for rendering dynamic views, offering a user-friendly experience for managing academic tasks.
